atoms around us what is an atom? atoms are building blocks. if you want to create a language, you'll need an alphabet. if you want to build molecules, you will need atoms from different elements.hydrogen peroxide, water, and carbon dioxide all have something in common: they are examples of molecular substances. discover what a molecular substance is, and learn about the different chemistry is the study of the composition, properties, and reactivity of matter. this may be your first time taking chemistry, but chances are you know a lot already from observing the world around youlegation strategies for the nclex, prioritization for the nclex, infection control for the nclex, free resources for the nclex, free nclex quizzes for the nclex, free nclex exams for the nclex, failed the nclex - help is heremit undergraduate curriculum map and ocw. explore ocw's coverage of the mit undergraduate curriculum with this interactive visualization. see prerequisite relationships and how topics are covered by different mit departments.a must-read for anyone who wants to participate in talk.origins. this article lays out the land for evolutionists and creationists alike, presenting the concepts of and the evidence for biological evolution.
