

Mastering Physics Solutions Chapter 5

A compound lens system consists of two converging lenses, one at $x = -20.0$ cm with focal length $f_1 = +10.0$ cm, and the other at $x = +20.0$ cm with focal length $f_2 = +8.0$ cm. Using the result of part c to determine the magnitude of the force per unit length they exert on each other. Unlock the secrets of physics with the Princeton Review. High School Physics Unlocked focuses on giving you a wide range of key lessons to help increase your understanding of physics. Principles with Applications Volume I (Chapters 1-15) and Mastering Physics with eText and Access Card (7th Edition) 7th Edition online homework and grading tools for instructors and students that reinforce student learning through practice and instant feedback. Welcome to MyLab and Mastering from Pearson for a complete list of programs/titles supported, click here.
